

Quilter's **CRUISE CONTROL™**

The premiere stitch length regulator
for the home sewing machine and quilting frame.

DESIGNED BY QUILTERS FOR QUILTERS.

Proudly made in the USA.

Rear Encoder Installation

The rear encoder bracket is installed on the back of the carriage that moves from side-to-side as shown in the photo. The encoder wheel should ride on the rail as shown.

Upper Encoder Installation

The upper encoder is mounted on the underside of the carriage that moves front-to-back. In the photos shown, the machine platform has been removed to show the encoder installation. Place the encoder bracket as shown in the photo so the encoder wheel sits evenly on the inner lip of the channel as shown in the photo.
